EditURLs Free [32|64bit]

Instructions to use EditURLs: Open the EditURLs program. If there are any Typed URLs being edited or deleted, you will be notified. Afterwards, the user will be presented with a screen that will allow them to edit their Typed URLs. Select the desired URLs and Press 'OK' to add them to the record or Press 'Delete' to remove them from the record. Navigate to the "File" menu and select "Save" to save the edited list of Typed URLs. Navigate to the "File" menu and select "Restore" to load the last saved "Typed URLs". Navigate to the "EditURLs" folder in the Start menu and double-click the shortcut named "EditURLs" to load the program. Note that the UrlFilter.exe application will launch automatically to validate the URLs. - You should be advised that UrlFilter.exe will not have read access to your hard disk and it will not be able to delete, edit, or add anything to the Registry. - UrlFilter.exe will continually run until you terminate it. - If you encounter an error while using the application, please refer to the EditURLs User Manual for instructions on how to restart the application. EditURLs

EditURLs is a Free browser tool that provides the user with the capability to edit individual URL addresses in Internet Explorer's Address Bar. These URL addresses are also referred to as "Typed URLs". EditURLs can be used to delete individual URLs or for clearing all of IE's Address Bar history. These URL addresses are maintained in the Windows Registry and can be edited using a Registry editor. However, one is generally cautioned that a miscue with a Registry editor could render one's system inoperable. Additionally, the Value names for the URL entries must be named consecutively (url1, url2, url3,..). EditURLs provides an easy to user interface to accomplish editing of the "Typed URLs" in the Windows Registry and maintain the required consecutive Value names. In addition to simple editing and deletion of individual "Typed URLs", EditURLs provides a function for deleting all of the URLs. Another feature that many users find convenient is the capability to restore a saved copy of the "Typed URLs". That is, the user can maintain his/her personal set of "Typed URLs" in a Master set for restoring at the click of a button. Recent additions include a function for Sorting the URLs and 'up' - 'down' buttons for manual reordering the URLs. EditURLs does not contain any 'ad-ware' or 'call-home' functions. Uses: · Delete individual URL addresses from the IE address bar · Clear all IE address bar history · Delete URL addresses from the Windows Registry · Delete all of IE's address bar history · Sorting options for the URLs · Restore saved URL addresses from the Windows Registry · Re-order a saved set of URLs by clicking on up and down buttons · URL View option to print URL values for the browser address bar · Options to search for values by Tag Name, Tag Value, and Value Name · URL setting with an ID of 100 · Provides a function to remove the '?' question mark from the IE address bar · Editing of the URL values is case insensitive · Display the order of the URL values in an alphabetical order · EditURLs has no options to save the changes to the Windows Registry. It only saves a copy of the current value name and value value of the URLs · EditURLs does not include a command line for editing the URL address values in

the Windows Registry · EditURLs can be used in conjunction with
