## **Methis Data.mill For Excel Crack + Torrent (Activation Code) [Win/Mac]**

Methis Data.mill for Excel is an add-in for Microsoft's spreadsheet editor that enables you to correct errors, eliminate duplicates and retrieve specific information about your customers, company or financial status. Entails an average difficulty setup First off, you should know that you are required to create an account on the developers website in order to try out the utility. You can register free of charge, whereas creating a new account takes little of your time. Even though the installer is in German, the installation itself is straightforward and should not pose any issues. You are required to enter your credentials in order to access the application. In case you do not view the add-in in the toolbar, then restarting Excel usually fixes the problem. Helps you extract specific chunks of data from spreadsheets The highlight of the add-in comes from its ability to retrieve specific types of information from your lists, including but not limited to phone numbers, email addresses, names, genders and postal addresses. You should know that the tool can recognize the genre of the users listed in your spreadsheet by accounting for possible cultural differences. More precisely, the app determines the genre based on the location of the user. Allows you to clean your files from duplicates A further noteworthy feature of the tool is that it enables you to remove duplicate records in your database. It is important to note that the utility can detect typo errors and, since it compares the information with the other data available, it can help you identify erroneous entries. For example, if you have customers with similar names, the app analyzes other info associated with them, such as address or postal code for instance, before returning the results. The function can be useful in reducing the size of your database and hence, reduce the costs of storage in the long run. A handy tool for anyone working with large Excel spreadsheets In the eventuality that you want to manage large Excel spreadsheets efficiently and clear them of duplicates, errors, deleted data or simple misspells, so you can use valid data for your next projects, then Methis Data.mill for Excel could lend you a hand. Maxisoft Uninstaller is a powerful and easy-to-use uninstaller for every Windows application. It can help you remove all currently installed application and its components with just a few clicks. Its powerful search function allows you to uninstall all the softwares that are installed by your... Maxisoft Uninstaller is a powerful and

## Methis Data.mill For Excel

The main function of the add-in is to detect, eliminate duplicate records, recover deleted data and retrieve specific information from databases. The application automatically compares your database for duplicate data, by analyzing all columns in your spreadsheet. Moreover, the tool can identify the "genre" of your users based on their region. For instance, if you have users with names that look like "Romania", this info is factored in by analyzing the city they reside in. The app allows you to scan your DB for typos, mistakes and most importantly, recover data that has been deleted. Users who have accessed the database often will find this tool useful. What's new in this version: Full Support for Windows XP, Vista, 7 and 8

Download Methis Data.mill for Excel 5.5.2.2, at Last Ever Freeware ScreenShots How to install Methis Data.mill for Excel Download Methis Data.mill for Excel. The latest version is 5.5.2.2. ## **Methis Data.mill For Excel Download [Win/Mac]**

If you have large and valuable Excel spreadsheets containing financial, customer, product or delivery data, then you might be worried about how to ensure that they are complete, accurate and valid. Our Excel Evaluation Tool, Methis Data.mill for Excel, has a function that compares the data inside your spreadsheets with the rest of the information available in the same document. By comparing to other data in your spreadsheet, the app can tell you if a specific column is incomplete and suggest missing names and addresses. If a particular name, address or phone number is found in another column, this makes it a perfect candidate to be included in the list of results. It also enables you to clean errors, names and addresses from your spreadsheets, in case they are already present in your database. As a bonus, you can also get rid of duplicates, so your Excel document contains no identical records. Using the Excel Evaluation Tool, Methis Data.mill for Excel, is a breeze because you simply have to import your Excel spreadsheet. We then generate a unique identifier for your document in order to ensure that we compare the same data you have inside the document. In a matter of seconds, the app will provide you with the list of duplicates and misspells present in your document. All you need to do is to remove those values from the results and drag them to a new document, where you can keep the first version, add the missing values or even correct them. As you can imagine, this makes your next project much easier. The Excel Evaluation Tool, Methis Data.mill for Excel, is a tool that can help you identify and clean the errors, duplicates and missing information from any kind of Excel document. How does it work? Like so. The technology behind the Methis Data.mill for Excel application is easy to understand. To begin with, the app will open your spreadsheet in the Excel editor and quickly generate a temporary identifier for it. This allows us to select the spreadsheet and compare the data it holds with the rest of the info found in the same document. After this, the app will analyze all the information available and come back with a list of errors, duplicates and missing values. The beauty of the application is that it doesn't need any additional knowledge of the structure of your document to work. Furthermore, the technology behind the app is secure and can't leak any user information. The Methis Data.mill for Excel add-in
