Roblox is an online game platform and game creation system developed by Roblox Corporation that allows users to program games and play games created by other users. Created by David Baszucki and Erik Cassel in 2004 and released in 2006, the platform hosts user-created games of multiple genres coded in the programming language Lua. For most of Roblox's history, it was relatively small, both as a platform and a company. Roblox began to grow rapidly in the second half of the 2010s, and this growth has been accelerated by the COVID-19 pandemic. Roblox is free to play, with in-game purchases available through a virtual currency called Robux. As of August 2020, Roblox had over 164 million monthly active users, including more than half of all American children under 16. Although Roblox has received generally positive reviews from critics, it has faced criticism for its moderation, microtransactions, and exploitative practices directed toward children. Previous studies have indicated that human thalamic projections to the cerebral cortex and limbic system are bilateral but have a distinct topographic organization, with the perirhinal/entorhinal cortex receiving the most input from the ventrobasal nuclei and the lateral nuclei receiving the most input from the lateral nuclei. However, it is not clear whether the thalamic and cerebral projections are similar or different across subregions of the temporal and frontal lobes. We used the anterograde diffusion of dextran-labeled brain tissue to examine thalamic afferents to cortical and limbic structures in the frontal and temporal lobes of three adult human brains. We investigated projections to the entorhinal and perirhinal cortices (semantic and anterior ectosylvian areas), amygdala (mainly the basolateral complex), hippocampus (CA and subicular areas), anterior thalamus, insular cortex, and precentral gyrus. We examined structural asymmetries for each structure, with the left hemisphere always viewed as the control hemisphere. The macroanatomical analysis of the anterior thalamic afferents was based on 31 injections and yielded projections to the entorhinal and perirhinal cortices and the amygdala. The thalamic afferents to the amygdala and the entorhinal cortex followed a lateromedial gradient; in addition, the temporal lobe projects mainly to the central/medial subdivision of
