Feedback: We would appreciate any feedback you may have on the program. The following are the bugs that we currently have on our radar, please provide feedback if you find any of these bugs: □ Patches are not stored locally and are loaded every time you start MPB. □ Patches should be loaded only once for a certain list, not for every time you start MPB. □ The application should have an option to enable/disable □ □ Patches that are not available locally (as explained above). □ The search should work on Macs too. -- Kevin Krolak krolak@sw.dec.com Bugs: There are lots of bugs, I'll list some of them here: - Opening patches from disk is slow, because every time the patch has to be loaded, stored and then opened. - There are many small problems with the MacOSX GUI. - The audio output device must be a □ Midi Output Device. - Alt-tab and Alt-Esc work too slow. - When there are several threads of Midi Output Devices, MPB will crash. Change Log: □ Updated the Ultrasound Support for Patches. □ The Patches will be stored locally now. □ This way you can start MPB without loading patches from disk. □ Now you can also use an iPod/iPhone as Midi output device.
