Adobe Photoshop, one of the world's most popular imaging software, is a powerful tool for photographers of all skill levels to use to edit, modify, and improve photos. The first version of this program was launched under the name Photoshop, on December 5th, 1990, and has continued to be updated and improved ever since, with the latest version being released on September 16, 2020. As I will not dive into detail regarding Photoshop's basic functionality, make sure to read A quick review of Adobe Photoshop CC , which includes a complete overview of both performance and feature changes. In this part, I will outline some of the new features that have been added to Photoshop CS. These features are mostly targeted towards enhanced quality control, in place to provide a more seamless editing experience. I will also touch on some of the compatible file formats that can be edited and saved in Photoshop CS. The program's newest features are built on a solid foundation of brilliant functionality. If I wasn't drooling over the images, I would be making a big pile of money, content within that. Photoshop blows my mind, every chance it gets. It continues to grow and mature as much as it needs to, but it isn't going to change. I spend months out of the year with Photoshop, and it feels like it could last forever. This program is the reason Photoshop is so popular. Since Adobe has allowed the programmers to create add-on functions, Photoshop becomes more useful. Even though Photoshop can create stunning artwork, it is not the best photo editor available. The Editors' Choice award goes to Adobe Photoshop Elements, which scores an average of 96 and is approximately 85-200 cheaper than Photoshop. For high-end work, we recommend only Photoshop and the higher-end versions such as CS5, CC, CS6, etc.

As you'll see below, Lightroom vs Photoshop is less a question of which is best but more a question of what you want to do. They have different purposes and for many photographers and editors it's not a question of either or - they use both but at different stages of their editing process. When it comes to RAM, again, if you are able to buy more than do so. RAM is what allows your computer to handle multiple tasks at once. When working as a designer or digital artist, using multiple Adobe applications at the same time can become a very normal practice. Adobe applications can be very taxing on any computer and more RAM helps to complete those tasks quickly. Having more RAM connected to your processor will ensure you have a highly optimized powerhouse computer to handle any and all Photoshop tasks. Ever since I was able to afford my own computer, I never purchased a computer with less than 16GB of RAM. Most computers nowadays come with at least 8GB of RAM which is sufficient. The one nice thing about RAM unlike a processor is that you can replace the RAM and add more after purchasing it. However, make sure to check this as again, companies like Apple have made it impossible to replace the RAM in their computers. It is always worth double checking! This can be slightly overwhelming because there are a few different Creative Cloud plans to pick from according to what your area of interest is. To make things simple there are 3 different options that you will have to choose from that include Photoshop. First the 'Photography' plan which is \$9.99/mo and grants you access to Adobe Photoshop and also Adobe Lightroom which is a program that allows for detailed photo editing. This is a great value considering the second option is \$20.99/mo for use of only Photoshop. The third and final option which I think is the best option is the Student and Teacher plan that is \$19.99/mo and includes access to every Adobe program available. This is an amazing value because you get access to everything Adobe has to offer. From there you can learn and try new programs that Adobe offers to see what your favorite is. In this era of the long tail, design and product managers are no longer working only to a full-day schedule. They're just as likely to work part-time or from home while juggling jobs, lifestyle commitments, and kids. To address these challenges and the long hours they put in, Adobe CC has introduced MindMap, an app that helps save 20% or more of the time designers used to spend on their projects. Designers can plan out and test ideas as they collaborate, using MindMap to view statuses, schedule building blocks, utilize interactions, and share updates with team members. The app effectively helps ease the workday angst by saving hours of time, and also lets designers do data-driven design work instead of trial-and-error. **Technology now drives innovation, and the creativity of software comes from inside the walls of companies.
