Because of You, Part 1 provides an interesting look at the way a few independent creators have used Photoshop to redefine themselves as independent creators in the 21st century. By leveraging Photoshop and the Internet, creatives are able to gain access to markets and others in ways that were far too cumbersome prior to the cloud, and YouTube and similar video sharing sites. Companies are taking notice and they are offering their own online services, as well. Multiple illustrators have discussed their influence on partner companies, how they are now able to make a living as indies, and how workflows are changing. Typically, independent creators do not have access to the stock photos and textures that big industry sellers like Adobe have so easily made available. Such contributors rely, instead, on their own ability to photograph and narrate the daily world around them. The ability to access this content and share it with others is crucial for independent artists who only work on a limited budget. More than ever, independent creatives need to find new ways to earn a living as well as make a living. The ability to work on your own and self-publish internet-based services has made this possible. Small business owners can take advantage of these two-in-one services to provide great content on their own schedules. This is also good news for independent artists who struggle to construct a complete living out of their passions. What You See Is What You Get is a personal look at the changes in professional compositing software from a creative's perspective. It's an exploration into how individuals have been able to utilize advanced industry tools to create and refine imagery and artwork. Content creators of many kinds found new ways to adapt to a world where Photoshop and After Effects are already necessary tools and not luxuries.
